

ABSTRACT OF DISCLOSURE

A wall mounting speaker assembly having a speaker unit, includes a stationary member mounted on a wall; a supporter supporting the speaker unit; a movable joint provided between the stationary member and the supporter, and combined with a vertical swiveling shaft and a horizontal tilting shaft, which make the speaker unit swivel and tilt; a lock provided on a bottom of the speaker unit; and a hook provided on the supporter to be engaged with the lock, preventing the speaker unit from moving upward. With this configuration, the present invention provides a wall mounting speaker assembly which can mount a speaker unit with a simple and convenient setup method without a screwing work, and has swiveling and tilting functions.
